

DOCUMENT NAME: Vegetation Management Priority Tag Procedure

DOCUMENT NUMBER: TD-7102P-17, Rev. 0

TAILBOARD ISSUED: 11/09/2020 TAILBOARD BY: 11/20/2020

What is changing?

This new electric distribution procedure presents instructions for vegetation management (VM) personnel handling vegetation conditions observed in the field that have both of the following characteristics:

- Affect overhead electric distribution facilities.
- Require Priority 1 or Priority 2 mitigation.

The Priority 1 (P1) reference replaces the HN-Immediate (HN-I) reference and Priority 2 (P2) reference replaces HN-Urgent (HN-U) reference.

Why does it matter?

The timelines and requirements for response have been modified. It is essential that all personnel adhere to the time constraints applicable to each of the priority conditions. These timelines are a business commitment made to better serve our customers, and further reduce the risk of vegetation related wildfire events.

- Priority 1 tags must be mitigated within 24 hours of identification when reported.
- Priority 2 tags must be mitigated within 30 days, unless constrained.

Required Action

Review, understand, and comply with expectations covered in the procedure. Roster documentation is required for the tailboard and discussion of the procedure.
